

FORK POSITIONER FOR FACILITATING REPLACEMENT
OF FORKS ON LIFT TRUCKS

ABSTRACT OF THE DISCLOSURE

5 A fork positioner for a forklift truck has
power-actuated yokes, each having a base from which a
pair of transversely spaced legs depend, for engaging
respective load lifting forks and adjusting their spacing
transversely along a fork-supporting member. Each of the
10 yokes is selectively movable between a fork-engaging
position and a fork-disengaging position, the latter
position permitting the fork to be lifted upwardly off of
the fork-supporting member for easy replacement of the
fork.
